

STRATEGIC MODERNIZATION FRAMEWORK

Government CIO & CTO *Modernization*, Delivered End-to-End.

2026 ————— 2035

GreyLee Services Group helps federal, state, defense, and critical-infrastructure organizations turn modernization mandates into delivered outcomes — combining executive consulting, program management, systems integration, and best-of-breed technology partnerships in a single accountable delivery model.

■ THE POSITIONING

Modernization fails in the seams — between the advisor, the integrator, and the vendor. GreyLee closes them by holding *single-point accountability* for the outcome, then bringing the right specialists under that accountability: teaming partners with decades of federal delivery behind them. One contract. One party answerable. The full bench.

■ WHY GOVERNMENT CUSTOMERS CHOOSE GREYLEE

01 Single-Point Accountability

GreyLee holds the contract and answers for the outcome. Behind us stands a bench of expert teaming partners with decades of federal delivery experience — assembled for your mission, managed by us, invisible to your program office.

02 Independent Technology Selection

We are not bound to any manufacturer's roadmap. Technology is selected on mission fit and evidence, and where a specialist is genuinely the right answer, we bring them in under our accountability rather than hand you off.

03 Mission First

Every engagement begins with the agency's mission outcomes rather than a catalog of technology features.

04 SDVOSB Advantage

Our SDVOSB status helps agencies meet small-business and socioeconomic contracting goals and opens set-aside and sole-source pathways under FAR 19.14 and VA Vets First — with senior program leadership on every engagement.

05 Executive Program Leadership

Built for complex, multi-year initiatives that demand governance, executive reporting, risk management, acquisition support, and disciplined cross-functional coordination.

■ OUR ADVISORY POSTURE

Assume the breach

Prevention alone is not a strategy. We advise agencies to plan for the intrusion that succeeds — and to be measured on how far it gets, not on whether it happened.

Contain the blast radius

Most damage comes from lateral movement after the first foothold. Our assessments map east-west flows, expose the paths an attacker would take, and close them by design.

Engineer for resilience

The measure of a modern program is not an unbroken perimeter but a mission that keeps running while an incident is contained, investigated, and closed out.

Five federal mandates are reshaping how government builds, secures, and sustains technology through 2035. Each carries a hard requirement — and a *GreyLee response* delivered with the specialist partners the mandate demands.

01

THROUGH
2030

AI Governance & Responsible AI

Deploy AI safely while preserving governance, privacy, explainability, and public trust.

EO 14179 · Jan 2025

OMB M-25-21

NIST AI RMF

GREYLEE RESPONSE

Enterprise AI roadmaps, governance frameworks, AI-readiness assessments, and data-modernization strategy — delivering secure AI through leading OEM partners.

02

ONGOING

Zero Trust & Identity Modernization

Identity is the new perimeter — and once it's crossed, nothing should be reachable by default. Secure users, workloads, APIs, devices, and data.

EO 14028

OMB M-22-09

NIST 8 00-207

CISA ZTMM

GREYLEE RESPONSE

Zero Trust strategy, ICAM consulting, and PKI modernization — plus segmentation and microsegmentation design that maps east-west traffic, denies lateral movement by default, and contains an intrusion to the workload where it started.

03

THROUGH
2028

Cybersecurity, Compliance & Supply-Chain Security

Demonstrate continuous compliance and prove resilience — not just controls on paper — across an increasingly complex supply chain.

CMMC 2.0

NIST 8 00-171 R3

8 00-53 R5

Fe dRAMP

SSDF

GREYLEE RESPONSE

Cybersecurity assessments, compliance gap analysis, CMMC readiness, and secure-SDLC advisory — with ransomware risk reduction measured by how far an attack can spread, not how many controls are checked.

04

THROUGH
2035

Post-Quantum & Cryptographic Modernization

Inventory cryptography, modernize PKI, and prepare for quantum-resistant encryption.

NSM-10 · May 2022

OMB M-23-02

FIPS 203/204/205

GREYLEE RESPONSE

Cryptographic discovery, certificate-lifecycle assessment, crypto-agility planning, and enterprise post-quantum implementation leveraging industry-leading OEM solutions.

05

THROUGH
2030

Legacy Modernization, Cloud & Workforce

Modernize decades-old infrastructure amid workforce shortages and mission continuity.

RTARA

Cloud Smart

TMF

Federal Data Strategy

GREYLEE RESPONSE

Modernization roadmaps, cloud-migration strategy, enterprise architecture, PMO support, application modernization, and operational transformation.

GreyLee owns the *full modernization lifecycle* — advisory, acquisition, and operational delivery. Where depth is required, we team with specialists carrying decades of federal experience. Accountability never leaves us.

01	ASSESS	Executive consulting, current-state and maturity assessments, and compliance gap analysis — including application dependency mapping and east-west traffic visibility that shows where an attacker could move and how large the blast radius would be today.
02	PLAN	Strategic roadmaps, modernization and acquisition strategy, enterprise architecture, governance, program planning, funding support, and requirements development.
03	PROCURE	VAR and SDVOSB contracting, OEM selection, distributor management (Carahsoft, TD SYNnex), licensing, hardware and software procurement, contract vehicles, and proposal support.
04	IMPLEMENT	Systems integration, solution deployment and configuration, cloud migration, identity modernization, segmentation and containment policy for critical assets and workloads, AI enablement, testing, and change management.
05	OPERATE & MAINTAIN	Program management, managed-services coordination, governance, compliance monitoring and reporting, lifecycle management, training, sustainment, and continuous improvement.

ASSESS → PLAN → PROCURE → IMPLEMENT → OPERATE → OPTIMIZE

One accountable partner. The full bench. **Mission delivered.**

■ IN BRIEF

GreyLee translates federal mandates into delivered modernization programs — assessment and advisory, roadmaps and acquisition, integration, program management, and sustainment. We hold the accountability and bring expert teaming partners with decades of federal experience to the work. We plan for the intrusion that gets through: *see the environment, contain what gets in, keep the mission running.*

ONE ACCOUNTABLE PARTNER

THE FULL BENCH

MISSION DELIVERED

GreyLee operates as an advisory-led systems integrator — the approach of the large federal consultancies, with the agility, technology independence, and socioeconomic advantages of an SDVOSB. We hold single-point accountability and bring **expert teaming partners with decades of federal experience** to every engagement. From AI governance and Zero Trust to compliance, cloud, and post-quantum readiness, we advise on the assumption that the perimeter will be crossed — and build programs that **contain the spread and keep the mission running**.
